Gender bias

SVG CANVAS HTTP API

Bar chart which can display multiple data series, stacked or side by side. Also supports both vertical and horizontal layout, with negative values descending below the x axis (or y axis if using horizontal layout). The bar item component can be customized to render any valid SVG element, it will receive current bar style, data and event handlers, there's an example in [storybook](#).

ACTIONS LOGS

Start interacting with the chart to log actions

Genre type	total
------------	-------

Generates a pie chart from an array of data, each datum must have an id and a value property. Note that margin object does not take radial labels into account, so you should adjust it to leave enough room for it.

You can also see more example usages in [the storybook](#).

See the [dedicated guide](#) on how to setup legends for this component.

SVG HTML CANVAS

A waffle component. You can fully customize it using the `cellComponent` property to define your own cell component, if you wish to do so you should have a look at [native SVG component](#) for available properties.

You can also see more example usages in [storybook](#).

Pie

Overview | Detail

SVG | CANVAS | HTTP API

Generates a pie chart from an array of data, each datum must have an id and a value property. Note that margin object does not take radial labels into account, so you should adjust it to leave enough room for it.

You can also see more example usages in [the storybook](#).

See the [dedicated guide](#) on how to setup legends for this component.

chart | code | data

```
import { ResponsivePie } from '@nivo/pie'

const MyPie = ({ data /* see data tab */ }) => {
  <ResponsivePie /* or Pie for fixed dimensions */
    data={data}
    margin={{ top: 40, right: 80, bottom: 80, left: 80 }}
    innerRadius={0.5}
    padAngle={0.4}
    cornerRadius={2}
    activeOuterRadiusOffset={8}
    arcLinkLabelsSkipAngle={10}
    arcLinkLabelsTextColor="#333333"
    arcLinkLabelsThickness={2}
    arcLinkLabelsColor={{ from: 'color' }}
    arcLabelsSkipAngle={10}
    arcLabelsTextColor={{ from: 'color', modifiers: [['darker', 2]] }}
    legends={[
      {
        anchor: 'bottom',
        direction: 'row',
        translateX: 50,
        itemWidth: 100,
        itemHeight: 30,
        symbolShape: 'circle'
      }
    ]}
  />
}
```

RECIPES

Using colors from data

Adding a metric in the center using a custom layer

Custom arc label component

Sync activeId between two pies

Implementing a custom legend
